Success Stories

The National Cancer Institute’s Technology Transfer Center (TTC) facilitates partnerships between the NIH research laboratories and external partners. With a specialized team, TTC guides the interactions of our partners from the point of discovery, to patenting, through invention development to licensing. We play a key role in helping to accelerate development of cutting-edge research by connecting our partners to NIH’s world-class facilities, resources, and discoveries. Some of our partnerships have resulted in the commercialization of therapeutics, vaccines, diagnostics, medical devices and research tools that benefit patients worldwide. TTC is proud to share a few examples of our successful partnerships.
